ABOUT

I build the thing. *Then I make it stick.*

Most enablement stops at content delivery. I design for behavior change: the manager who forgets to reinforce, the new hire in a different time zone, the VP who wants proof it worked.

My background covers the full operating cycle: HRIS triggers, day-one experience, 30-60-90 structure, sales methodology enablement, manager development, and ongoing performance support. I have built inside ad tech, freight logistics, automotive retail, and media.

Before my current role: field coach for a national EV launch across 13 markets in the Southeast. Before that: embedded in BPO ops at a freight startup, building training to match how work actually happened.

Every role taught me to get close to the work before designing for it. That is the thing that makes programs land.

"The enablement captured all the key questions I had as a beginner and helped me feel much more confident experimenting with the tool."

ID PROCESS · ADDIE IN PRACTICE

01 Needs Analysis

Stakeholder interviews, gap analysis, learner persona mapping. Output: design brief with objectives, constraints, and success metrics.

02 Learning Objectives

Written to Bloom's taxonomy before any content is designed. Action verbs mapped to level. Each objective tied to an assessment item from day one.

03 Design Document

Storyboard with narration scripts, visual direction, interaction type, and SCORM logic. SME review happens here, not after production.

04 Production

Synthesia for avatar narration, Camtasia for screen captures, Storyline for interactions. SCORM packaging and LMS testing before any learner access.

05 Evaluation

L1 pulse post-completion. L2 quiz scores. L3 behavior survey at 30 days. L4 tied to business metric agreed in design brief. Iteration quarterly.

BLOOM'S TAXONOMY · ASSESSMENT ALIGNMENT

Looking for the right fit.

I do my best work at companies where the product genuinely excites me and the problems are complex enough to need real thinking.

I want to contribute at every layer. Not just the training layer.
